RE: **70879_NH-6-2(120)_McCook – Indianola_Supplemental Section 106 evaluation**

The project referenced above was processed as a Tier II project on 08/26/15 using a project description date of 12/13/14. Project description changes made on 07/24/15 were not reviewed. This supplemental evaluation considers the changes of 07/24/15 as well as proposed striping of turn lanes and construction of adjacent earth shoulders.

I have reviewed the project description changes made on 07/14/16 as well as the proposed striping of turn lanes and construction of adjacent earth shoulders. These project activities are within the area of potential effect (APE) considered for this project. The proposed striping of turn lanes and construction of adjacent earth shoulders would occur within the existing ROW and therefore, are also within the APE considered. The project effects recommendation of no historic properties affected made on 08/26/15 remains appropriate.

This project remains a Tier II project.
